

Roll Shade Use and Maintenance

Castec roll shades are the window treatment of choice for a long-lasting product with multiple benefits. As long as the product is properly used, it will last much longer than the warranty period.

Product Use

Operate the bead chain mechanism by pulling directly below the clutch. Do not operate the shade by pulling the bead chain at extreme angles to the shade.

Make sure that the installer attaches a chain guide to ensure proper operation of the shade and provide chain safety.

Do not operate the shade by pulling on the hem bar.

Do not apply excessive force when pulling down or pulling up.

Product Maintenance

Castec solar shading fabrics are made from either fiberglass or polyester-coated yarns. These jacketed yarns are heat bonded at each crossover for added strength. The woven fabric is coated with an ultraviolet inhibitor and mildew resistance formula. The fabric requires a minimum of maintenance.

Clean fabrics by using any of the following methods:

- Vacuum periodically.
- Brush in place.
- Use soapy water or mild detergent and soft brush followed by thorough rinsing.
- Apply restorative vinyl cleaners.

The same cleaning instructions can apply to all vinyl-coated fiberglass blackout fabrics.
